

Informations how to make a shirt.

With every picture there is a drawn instruction. This instruction is followed by explanation of every activity. Drawings show stages of production one after another. The result of folding can be seen at the next picture.

Folding the paper is very easy....

Left side of the colour paper

The top of the colour paper

Fold and straighten.

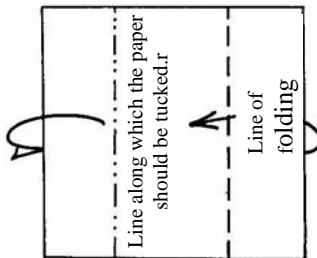

Turn the model to the other side.

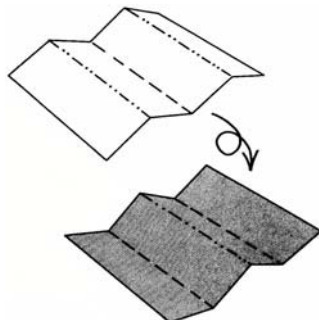

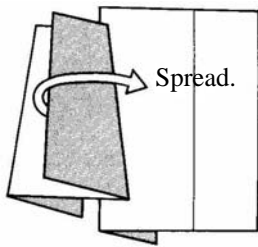

Open the model in this place and fold it into the indicated direction.

Tuck the paper along the line.

Fold the paper along the line

Whether the line is the line of tucking or folding depends on the side we look at it. When we turn the paper on the other side, the line of tucking becomes the line of folding.
